1. Introduction

1.1 Purpose of this Document

This Functional Requirements Document (FRD) translates the approved Client Requirement Document, Requirement Analysis, and Scope Definition into precise, testable functional requirements for the TastyGo platform. It is the primary reference for the design and development teams and the basis against which QA will validate the delivered system.

1.2 Scope

This FRD covers all four TastyGo applications — Customer App, Restaurant Partner Panel, Delivery Rider App, and Admin Dashboard — for the Jaipur-only Phase 1 launch, consistent with the Scope Definition. Features marked Out of Scope in that document are not detailed here.

1.3 Intended Audience

- Development team (mobile, web, backend) — as the build specification.
- QA team — as the basis for test case design.
- Client stakeholders — to validate that documented functionality matches business intent.
- Project Manager — to track delivery against agreed requirements.

1.4 Definitions & Acronyms

Term	Definition
FRD	Functional Requirements Document
FR	Functional Requirement (unique identifier prefix, e.g., FR-CA-01)
NFR	Non-Functional Requirement
MVP	Minimum Viable Product — the Phase 1 release scope
KYC	Know Your Customer — identity verification process for riders/restaurants
OTP	One-Time Password used for mobile/email verification
UAT	User Acceptance Testing
SLA	Service Level Agreement

1.5 References

- Client Requirement Document — TG-CRD-2026-01
- Requirement Analysis & Scope Definition documents
- Feature List and User Stories (US-01 through US-14)
- Project Proposal — TG-PROP-2026-01

2. Project Overview

TastyGo is a food delivery platform launching exclusively in Jaipur, connecting customers with local restaurants through a customer mobile app, giving restaurants a self-service partner panel, enabling delivery riders to fulfil orders via a dedicated app, and giving the client's operations team full visibility and control through an admin dashboard. All four applications share a single backend and data model.

Attribute	Detail
Platform Modules	Customer App, Restaurant Partner Panel, Delivery Rider App, Admin Dashboard
Launch Market	Jaipur, Rajasthan (single-city MVP)
Primary Platforms	Android + iOS (customer, rider apps); Web (restaurant panel, admin dashboard)
Payment Modes	UPI, cards, net banking, wallets, cash on delivery

3. Functional Requirements — Customer App

MODULE 1 OF 4

Requirements governing customer registration, discovery, ordering, payment, and tracking.

FR ID	Requirement Description	Priority	Related User Story
FR-CA-01	The system shall allow a customer to register using a mobile number verified via OTP.	Must	US-01
FR-CA-02	The system shall allow login via registered mobile number, email, or supported social login.	Must	US-01
FR-CA-03	The system shall prevent duplicate account creation using an already-registered mobile number.	Must	US-01
FR-CA-04	The system shall display a list of restaurants located within the customer's serviceable delivery radius, based on saved or current location.	Must	US-02
FR-CA-05	The system shall allow the customer to search restaurants and dishes by name, with results updating as text is entered.	Must	US-03
FR-CA-06	The system shall allow filtering of restaurant results by cuisine, rating, and price range.	Must	US-03
FR-CA-07	The system shall display a restaurant's full menu with item photos, prices, and available customizations.	Must	US-03
FR-CA-08	The system shall allow the customer to add, edit quantity, and remove items from the cart before checkout.	Must	US-04
FR-CA-09	The system shall allow entry of a valid promo code at checkout and shall reject expired or invalid codes with a clear error message.	Must	US-04
FR-CA-10	The system shall display a bill summary showing item total, taxes, delivery fee, discount applied, and grand total prior to payment.	Must	US-04
FR-CA-11	The system shall support checkout via UPI, credit/debit card, net banking, wallet, and cash on delivery.	Must	US-05
FR-CA-12	The system shall not create a confirmed order record if payment is not successfully completed (except for cash on delivery orders).	Must	US-05

FR ID	Requirement Description	Priority	Related User Story
FR-CA-13	The system shall send a payment/order confirmation to the customer immediately after successful checkout.	Must	US-05
FR-CA-14	The system shall display live order status progressing through Placed, Accepted, Preparing, Picked Up, Out for Delivery, and Delivered.	Must	US-06
FR-CA-15	The system shall display the delivery rider's approximate live location on a map once the order status is Picked Up.	Must	US-06
FR-CA-16	The system shall display and update an estimated delivery time visible to the customer throughout order fulfilment.	Must	US-06
FR-CA-17	The system shall prompt the customer to rate the food and delivery experience separately, only after the order is marked Delivered.	Should	US-07
FR-CA-18	The system shall display a customer's past orders with the option to reorder in a single action.	Should	US-07 (implied)
FR-CA-19	The system shall allow the customer to save favorite restaurants and dishes for quick access.	Could	—
FR-CA-20	The system shall allow the customer to schedule an order for a future delivery time slot.	Could	—

4. Functional Requirements — Restaurant Partner Panel

MODULE 2 OF 4

Requirements governing restaurant onboarding, menu, and order management.

FR ID	Requirement Description	Priority	Related User Story
FR-RP-01	The system shall provide an onboarding workflow allowing a restaurant to submit business details and required documents for verification.	Must	US-08
FR-RP-02	The system shall route submitted restaurant applications to the Admin Dashboard for review and shall not list an unapproved restaurant to customers.	Must	US-13
FR-RP-03	The system shall allow an approved restaurant to add, edit, and remove menu items, including price, description, and photo.	Must	US-08
FR-RP-04	The system shall reflect an item marked unavailable on the customer-facing menu within 60 seconds.	Must	US-08
FR-RP-05	The system shall apply price changes only to orders placed after the change, not to orders already in progress.	Must	US-08
FR-RP-06	The system shall notify the restaurant panel audibly and visually when a new order is received.	Must	US-09
FR-RP-07	The system shall allow the restaurant to accept or reject an incoming order, with a mandatory reason captured on rejection.	Must	US-09
FR-RP-08	The system shall notify the admin team if an order is not accepted or rejected within a configurable timeout period.	Must	US-09
FR-RP-09	The system shall notify the customer immediately if their order is rejected by the restaurant.	Must	US-09
FR-RP-10	The system shall allow a restaurant to toggle its online/offline status, immediately hiding it from customer search when offline.	Must	US-10
FR-RP-11	The system shall allow a restaurant to schedule recurring closed hours in advance.	Should	US-10
FR-RP-12	The system shall provide the restaurant with a report of order volume and settlement summary by day and week.	Should	—

5. Functional Requirements — Delivery Rider App

MODULE 3 OF 4

Requirements governing rider onboarding, order assignment, and delivery execution.

FR ID	Requirement Description	Priority	Related User Story
FR-RD-01	The system shall require a rider to submit KYC documents and shall activate the rider account only after admin approval.	Must	US-11
FR-RD-02	The system shall present nearby delivery requests to available riders within a configurable maximum distance.	Must	US-11
FR-RD-03	The system shall display pickup location, drop location, and estimated payout before a rider accepts a delivery request.	Must	US-11
FR-RD-04	The system shall reassign an unaccepted delivery request to another available rider after a defined timeout.	Must	US-11
FR-RD-05	The system shall provide one-tap navigation handoff to the rider's preferred maps application.	Must	US-11
FR-RD-06	The system shall restrict delivery status updates to the defined sequence: Picked Up → En Route → Delivered.	Must	US-12
FR-RD-07	The system shall log a timestamp for each delivery status change for reporting and dispute resolution.	Must	US-12
FR-RD-08	The system shall prevent an order being marked Delivered unless the rider is within the drop-location geofence, or an admin manually overrides this check.	Must	US-12
FR-RD-09	The system shall display the rider's completed deliveries and earnings for the current and past periods.	Should	—

6. Functional Requirements — Admin Dashboard

MODULE 4 OF 4

Requirements governing platform-wide administration and oversight.

FR ID	Requirement Description	Priority	Related User Story
FR-AD-01	The system shall present all pending restaurant applications with the ability to approve, reject, or request more information.	Must	US-13
FR-AD-02	The system shall make an approved restaurant visible to customers within a defined SLA after approval.	Must	US-13
FR-AD-03	The system shall provide a live, city-wide view of all active orders, including status and assigned rider.	Must	—
FR-AD-04	The system shall log every customer complaint or refund request with order ID, reason, and current resolution status.	Must	US-14
FR-AD-05	The system shall allow an admin to issue a full or partial refund, with the resulting status visible to the customer in their order history.	Must	US-14
FR-AD-06	The system shall allow an admin to view and suspend customer, restaurant, or rider accounts for policy violations.	Must	—
FR-AD-07	The system shall provide analytics on order volume, revenue, top-performing restaurants, and delivery performance.	Should	—
FR-AD-08	The system shall allow an admin to create and manage promo code campaigns, including validity period and usage limits.	Should	—

7. Functional Requirements — Payments & Notifications

CROSS-CUTTING MODULE

Requirements shared across applications for transaction processing and customer/partner communication.

FR ID	Requirement Description	Priority	Related User Story
FR-PN-01	The system shall process customer payments through an integrated third-party payment gateway supporting UPI, cards, net banking, and wallets.	Must	US-05
FR-PN-02	The system shall support cash on delivery as a payment mode, with reconciliation handled by the assigned rider.	Must	US-05
FR-PN-03	The system shall send push notifications for key order events: order placed, accepted, out for delivery, and delivered.	Should	—
FR-PN-04	The system shall send an SMS or email confirmation for successful order placement and successful/failed payment.	Should	—
FR-PN-05	The system shall calculate and record restaurant payout amounts per order for later settlement.	Must	—
FR-PN-06	The system shall calculate and record rider earnings per completed delivery.	Must	—

8. Non-Functional Requirements

NFR ID	Category	Requirement
NFR-01	Performance	Restaurant listing and search results shall load within 3 seconds under normal network conditions.
NFR-02	Performance	The system shall support at least 500 concurrent active orders at launch without degradation in response time.
NFR-03	Availability	Core ordering functionality shall maintain 99.5% uptime, excluding scheduled maintenance windows.
NFR-04	Security	All payment transactions shall be processed via a PCI-DSS compliant payment gateway; the platform shall not store raw card details.
NFR-05	Security	User passwords and sensitive data shall be encrypted at rest and in transit.
NFR-06	Usability	The customer app checkout flow shall be completable in 3 taps or fewer from cart to order confirmation, assuming saved payment details.
NFR-07	Scalability	The backend architecture shall support horizontal scaling to accommodate growth in order volume without a redesign.
NFR-08	Compatibility	The customer and rider apps shall support the most recent two major Android OS versions and two major iOS versions.
NFR-09	Maintainability	All applications shall be built using widely-adopted frameworks to avoid single-vendor lock-in for future maintenance.
NFR-10	Auditability	All order status changes, refunds, and account suspensions shall be logged with timestamp and responsible user/system for audit purposes.

9. Business Rules

- BR-01: An order can only be placed for restaurants currently marked “ongoing” and within the customer's serviceable delivery radius.
- BR-02: A restaurant must be approved by an admin before it becomes visible or orderable by customers.
- BR-03: A rider must complete KYC verification and receive admin approval before being eligible for order assignment.
- BR-04: Promo codes cannot be combined unless explicitly configured as stackable by the admin.
- BR-05: Refunds for cash-on-delivery orders shall be processed as store credit or bank transfer, not reversed at the point of delivery.
- BR-06: An order cannot be marked Delivered without passing through the Picked Up and En Route statuses, except via admin override.
- BR-07: A restaurant's menu price change never retroactively affects an order already placed and confirmed.
- BR-08: Restaurant payout calculations shall deduct the platform commission rate agreed at onboarding before settlement.

10. Data Requirements

10.1 Key Data Entities

Entity	Description
Customer	Registered app user placing orders; includes profile, saved addresses, and payment preferences.
Restaurant	Partner business entity with profile, documents, approval status, and commission terms.
Menu Item	A dish belonging to a restaurant, with price, description, photo, and availability status.
Order	A customer transaction, linked to a restaurant, items, payment, rider, and status history.
Rider	Delivery personnel with KYC status, current availability, and assigned deliveries.
Payment Transaction	Record of a payment attempt/result, linked to an order and payment gateway reference.
Promo Code	A discount definition with validity period, usage limits, and applicable conditions.
Review	Customer-submitted rating and comment linked to a completed order.

10.2 High-Level Data Relationships

- One Restaurant has many Menu Items.
- One Customer can place many Orders; one Order belongs to exactly one Customer and one Restaurant.
- One Order contains many Order Line Items, each referencing a Menu Item.
- One Order is assigned to at most one Rider at a time.
- One Order has exactly one Payment Transaction (excluding retries).
- One Order may generate at most one Review after delivery.

11. External Interface Requirements

Interface	Purpose	Requirement
Payment Gateway	Process customer payments (UPI, card, net banking, wallet)	Real-time transaction initiation and status callback; PCI-DSS compliant provider (e.g., Razorpay, Cashfree)
Maps / Geolocation Service	Distance calculation, delivery radius checks, rider navigation	Real-time geocoding and route/distance API
SMS / OTP Gateway	Registration verification and order alerts	Delivery within 30 seconds under normal conditions
Push Notification Service	Order status alerts within apps	Reliable delivery to Android and iOS devices
Email Service	Order and payment confirmations	Transactional email delivery with delivery status tracking

12. Assumptions & Constraints

12.1 Assumptions

- Restaurant partners have basic smartphone/computer literacy sufficient to use a self-service web panel.
- Riders will primarily use company-provided or personal smartphones meeting minimum OS requirements (NFR-08).
- Initial restaurant partner onboarding volume is manageable through the approval workflow without additional staffing at launch.
- A single payment gateway is sufficient for Phase 1; multi-gateway redundancy is a future consideration.

12.2 Constraints

- All functionality described is scoped to Jaipur only, per the Scope Definition; no multi-city logic is included in Phase 1.
- The system does not support restaurant self-delivery fleets; all deliveries are fulfilled by the platform's own rider network.
- Functionality not explicitly listed in this FRD is out of scope and must go through the Change Request process before being added.

13. Requirements Traceability Matrix

This matrix provides a sample trace from business need through to functional requirement, confirming no requirement exists without a documented source and no key user story is left uncovered.

User Story	Business Need	Functional Requirement(s)	Module
US-01	Quick, low-friction registration	FR-CA-01, FR-CA-02, FR-CA-03	Customer App
US-04	Review and adjust order before paying	FR-CA-08, FR-CA-09, FR-CA-10	Customer App
US-06	Real-time order tracking	FR-CA-14, FR-CA-15, FR-CA-16	Customer App
US-09	Restaurant only commits to fulfillable orders	FR-RP-06, FR-RP-07, FR-RP-08, FR-RP-09	Restaurant Panel
US-11	Rider receives relevant, fair delivery requests	FR-RD-02, FR-RD-03, FR-RD-04	Rider App
US-13	Only verified restaurants go live	FR-RP-02, FR-AD-01, FR-AD-02	Admin Dashboard
US-14	Disputes handled fairly and quickly	FR-AD-04, FR-AD-05	Admin Dashboard

Note: This is a representative sample. The full traceability matrix, mapping all 20+ functional requirements per module to their source user stories, is maintained in the project tracker for day-to-day development use.

14. Approval

This Functional Requirements Document is considered baselined once signed below. Any subsequent change follows the Change Request process defined in the Scope Definition document.
